

Subj: Material Numbers Film Capacitors BCC Brand

Due to the fact that we changed our computer systems for all film capacitors to SAP we need now also for the BCC branded capacitors a alpha numeric system for the material numbers. Since we used already for the Americas a BFC2... at the beginning of the code number we decided to transfer this to all film capacitors of the BCC portfolio.

Means: 2222 XXX XXXXX becomes BFC2 XXX XXXXX

With this info sheet we want to confirm, that this is only a change of the material code! Nothing has changed on the capacitors itself! No technical modification, no change in the specifications.

Landshut, 8.3.2007
